

PAID ACCESS

to Clean Public Conveniences

Waist-high turnstiles prevent undesired entrance to the restrooms during the occasional absence of the attendant. Coin acceptors for six different coins or tokens can be installed.

Permanently attended rest room entrances can be managed using comfortable turnstiles and coin acceptors in safe housings.

An automated payment machine with change return and receipt printer can be situated at the restroom entrance. The receipt can double as a voucher helping to turn your toilet visitors into restaurant guests or gift shop customers.

In much-frequented public restrooms, turnstiles with a higher level of protection against climbing over are used. With ample room in the lower section of the barrier, entering with bags is not a problem.

Upon request, your little guests can be offered a separate access particularly suitable for children. The children's entrance is cut into the gate required for wheelchair and stroller access, maintenance and escape.

Clean, well-kept sanitary facilities are part of your company's image. This is true for service areas, train stations and restaurants as well as for event venues, trade shows and museums.

GOTSCHLICH has developed specific solutions for controlled access to toilets and washrooms that reliably help generate revenues required to cover the expenses for cleaning and care of your sanitary facilities.

The escape gate with TÜV-approved components assures fast clearing and a safe escape route whenever a problem occurs in closed public restrooms. Upon request, all GOTSCHLICH access control installations can be equipped accordingly. →

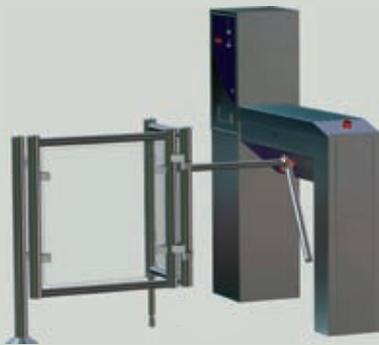

THE SUCCESSFUL GOTSCHLICH ALL-INCLUSIVE CONCEPT

for the operation of paid access to WC facilities

Based upon more than 35 years of experience in designing and manufacturing access control solutions for sports and leisure facilities, commercial real estate and industrial plants, we are offering our services as your partner for a certain period of time. You are operator and/or owner of toilet facilities? We install a customized access control solution with turnstiles, escape solutions approved by the relevant authorities and, of course, with reliable automated collection of the entrance fee. With regular preventive maintenance, we keep your installation in perfect working condition. Occasionally required spare parts are replaced free of charge. Even labour and travel times are included in the all-inclusive packet deal.

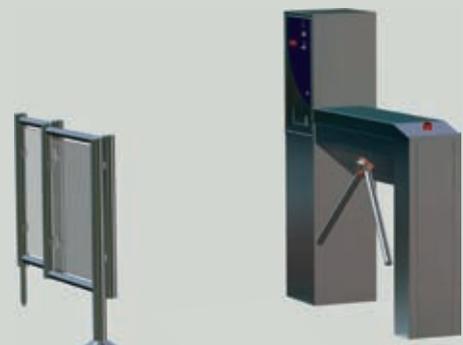

As your partner, we receive a fair share of your daily revenues generated by this installation towards the refinancing of our investment. The partnership can be entered for a definable period of time. What is particularly welcome to our partners is the fact that the refinancing rate is variable, following fluctuations of the installation's utilization. In times of slow traffic, your payments are minimal; when your business thrives, your payback rate is higher. And you can buy the entire installation any time you like.

Ask us for a proposal of an individual solution to cater for your specific requirements.

Regular operation

Where entrance situations are particularly narrow and escape requirements must be met, our reliable electromechanical folding escape gate, combined with the patented asymmetrical 2 arm turnstile mechanism is the perfect answer. With this equipment, your guests enjoy the comfort and safety of a professional solution even in the narrowest passages.
